Dear All,

**Dr Richard Fleming PhD MD JD (see below) has kindly agreed to update us on the coming criminal indictments at our Zoom meeting Sunday 14 August 2022 at 9 pm London time, 4 pm New York time, 1 pm Los Angeles time (see link here <https://us02web.zoom.us/j/9352118786?pwd=UlowWHpKdmVDeU1Hb1g0N3RpZDdqQT09> and invitation below)**

Richard M Fleming, PhD, MD, JD is a Physicist, Nuclear Cardiologist, and Attorney who developed and presented the InflammoThrombotic Disease Theory at the 1994 American Heart Association Conference, patented FMTVDM (FlemingMethod) to quantitatively measure changes in regional blood flow and metabolism, and began investigating SARS-CoV-2/COVID-19 in January of 2020. He conducted an 1800 person NCT and has been investigating treatments for individuals who have been vaccinated as well as the origins of SARS-CoV-2. He is currently presenting around the USA as a speaker for the CrimesAgainstHumanityTour focusing on bringing Criminal Indictments against those responsible for these Biologic Gain-of-Function weapons.

I'll probably have to miss this tomorrow but would like to submit a question in advance.

Will questions about the existence of the fake virus be prohibited again? If so, why let people who talk about "viruses" (replication-competent intracellular obligate parasites that transmit between hosts and cause disease via natural modes of exposure) off the hook for providing scientific evidence to back up their claims?

Richard Fleming prefers the point-and-declare approach to virology, as highlighted in a recent webinar by Tom Cowan @47:15:  
<https://www.bitchute.com/video/rekrHZ52IKZy/>

Richard also put out a video back in March wherein he:

- insisted "*we know it exists because we sequenced it*"
- implied that the existence of bronchoalveolar lavage fluid samples is controversial
- showed a video of the technique for extracting bronchoalveolar lavage fluid from a patient and labelled this "OBTAINING SARS-COV-2 FROM THE LUNGS"
- insisted that PCR "tests" are legit

<https://rumble.com/vwqkml-18-pieces-of-misinformation-you-need-to-know..html>

In case Richard tries to pull a [Steve Kirsch](#) tomorrow, pretending that I ran away from a debate with him: Richard contacted me for a debate back in July (distracting from the new [Virus Challenge](#)), inexplicably insisted that Steve "I rely on other people's opinions" Kirsch and the [widly vulgar](#) Kevin McCairn be involved, then many emails later decided that I'm not qualified to debate him.

FYI, there's an interesting post about Richard on the FBI's website:

<https://archives.fbi.gov/archives/omaha/press-releases/2009/om082009.htm>

Christine

My beliefs, your beliefs, Richard's beliefs... who cares?

Where is the science to show that SARS-COV-2 or any other alleged virus exists?

---

Ms Massey

The science resides in the annals, papers, universities, libraries, labs, clinical knowledge, epidemiology of virologists/pathologists/clinicians over many years of intensive study

I challenge you to first fully immerse yourself in these records - learn well what you are challenging - and then still to emerge with the same unanswerable and, in my opinion, naive questions you continue to pose denying viruses and virology

This behaviour throws this group into appearing to approve of and contain unscientific fringe members, leading to it being an easier target for those we are challenging regarding social and medical issues to do with the management of Covid19

Please start your own group to air these pseudoscience ( my view) debates ; they aren't really appropriate here, I believe

John H Abeles MD

Dr. Alan Bain <[REDACTED]>

Sun, Aug 14, 2022 at 11:07 PM

I appreciate what everybody says and shares. Let's keep this simple. Doctors like myself are at the front lines fighting this whatchamacallit that some people don't call a virus.

How are we useful if we can't support doctors like McCullough, Kory, Steinberg, Chetty, Urso and so many others from across this country of ours in this world of ours.

Fine somehow this whatchamacallit has been quelled by steroids, has been quelled by ivermectin has been quelled by hydroxychloroquine.

The priority that this is not a virus to me is moot. I don't care if I call it a whatchamacallit. Arguing about what it is and what it isn't gets very frustrating.

People are dying out here and everywhere. people are fighting whether a vaccine is the way to go to save millions of lives or not.

This is a total moving Target and people have to be more fluid in their thinking. It's like when everybody says thank God, I got the vaccine Cuz it could have been worse well during what iteration of this whatchamacallit.

I agree with Dr Abeles because he appears equanimitous and he's practical in his thinking. And at the same time, I understand pleomorphism and I understand energetics very well. Now is not the time for us to argue. This group must be separated into the theoreticians and the practitioners.

I'm still struggling whether the vaccine program really was valuable or not. People believe from 2020 to 2021 that 20 million lives were saved by a device that was fighting against a whatchamacallit. Certain statisticians with their amorphous modeling, have stated that this occurred.

I'm sorry all I care about is that there are people who are dead because they sacrificed themselves to a new technology and those that are alive because they sacrificed themselves to a new technology. How we're going to tease this apart where are real statisticians?

For Dr Massey why don't you get Dr Vandenbosch on the phone right now talk to him about it. He's no conspiracy guy he's proffered many important ideas. where he in the group is and why has not Dr Massey contacted him?

Why people are getting frustrated in this group is because we have the front-line practical people and the theoreticians and socially driven and analytical folks that are not on the front lines.

Ok, The Delta that is NOT a virus that is amenable to the above medications and might have been helped by some of these vaccines or might not have helped.

What I'm saying is let's get practical. We need to be together on this and not fight these a priori moot points.

We've got athletes dying on the spot. We've got movie stars dying on the spot. We've got regular folks dying on the spot from covid or the whatchamacallit or from these fake mma vaccines...

Let's get real..

Alan Bain

Dr McCullough or the group managers :

Could we not limit discussion in this group to real science in the cause of challenging the conventional approaches by government and its agencies - with the abetting of big Pharma and its academia - to the social management, treatment and prevention of Covid19?

The to and fro around the idea that viruses don't exist - thus virology claimed as a false science - is, I am sure, not the intention of this group's formation but properly belongs in a group elsewhere?

John H Abeles MD

In other words, no one here has any science demonstrating any virus or any undefined whatchamacallit.

Would anyone willingly get jabbed or submit to any measures whatsoever if they knew there was no science behind the alleged viruses/whatchamacallits and that virology is a weaponized delusion distracting from the true causes of dis-ease and true solutions?

Would the world be a better place if people knew the truth? Or should we just keep going along with the delusion?

I am not preaching censorship, but the matter of the existence or not of viruses is off base with the intentions of this group's originating interests

It is distracting from the focus of this group which was not formed, as I believe, to discuss this idea which applies to many other disease situations than Covid19 and it is the latter that is the group's intended focus

Taking the argument - which does nothing to further management, prevention abs treatment of Covid19- into a public forum elsewhere - and opening wide there - discussion is NOT a call for censorship

JHA
